

# Year 3 - addition

Objective/s

Concrete

Pictorial

Abstract

To add numbers with up to three digits, using formal written methods of columnar addition - numbers up to 1,000.

Use straws alongside the calculation to add. Children encouraged to use 'bunches' of ten when possible. This should progress onto using base 10 alongside the calculation when numbers get larger. Children should be taught when to exchange while

Draw place value counters in a place value chart / be presented with pictures of place value counters in a place value chart to add. Children should be taught when to exchange - relating to their work in the concrete and be able to show this in their drawings.

(Showing the abstract alongside the pictorial can help children make the connection).

Start the formal written method by partitioning the numbers into clear place value columns (relating to the concrete and pictorial work). Children should be taught when to exchange and be able to show this in their calculations.

	3	1	7
+		4	6
	3	6	3
		1	

exploring this practically, beginning with exchanging ten ones (progressing if children are secure).

Use place value counters alongside the calculation. Children should be taught when they need to exchange, beginning with exchanging ten ones (progressing if children are secure).

*Suggested time: Children must be secure adding using concrete resources before moving on to other methods (could need a whole week for this).*

Children draw or presented with pictures of base 10 to add. Children should be taught when to exchange - relating to their work in the concrete and be able to show this in their drawings.

(Showing the abstract alongside the pictorial can help children make the connection).

*Suggested time: 1 lesson without exchanging, 2 lessons with exchanging.*

Children should progress on to the compact column method to add. Children should be taught when to exchange and be able to show this in their calculations.

Possible rule to teach:

**Addition: Column Method**

<p>1</p> $\begin{array}{r} 453 \\ +348 \\ \hline \end{array}$ <p>Place the numbers one on top of the other, lining up the hundreds, tens and ones.</p>	<p>2</p> $\begin{array}{r} 453 \\ +348 \\ \hline 1 \end{array}$ <p>Add the ones and write the answer</p>	<p>3</p> $\begin{array}{r} 453 \\ +348 \\ \hline 1 \end{array}$ <p>Regroup any tens under the tens column.</p>
<p>4</p> $\begin{array}{r} 453 \\ +348 \\ \hline 01 \end{array}$ <p>Add the tens including any tens you have regrouped. Regroup any hundreds under the hundreds column.</p>	<p>5</p> $\begin{array}{r} 453 \\ +348 \\ \hline 801 \end{array}$ <p>Add the hundreds including any hundreds you have regrouped.</p>	<p>6</p> $\begin{array}{r} 453 \\ +348 \\ \hline 801 \end{array}$ <p>Check your answer.</p>

*Suggested time: 2-3 lessons using the expanded columns method beginning without exchanging and progressing on to exchanging. 2-3 lessons using the compact column method beginning without exchanging and progressing on to exchanging. Some children may need the concrete/pictorial alongside the abstract.*

*If secure*, children *MAY* progress on to the expanded /compact column method to multiply a two-digit number by a one-digit number. It is always helpful to present the abstract along with concrete / pictorial to support children to understand the method.

**KEY  
VOCABULARY**

digits multiplication multiply times array groups of lots of  
repeated addition product commutative column method place value column grid

# Year 3 - division

Objective/s

Concrete

Pictorial

Abstract

To write and calculate mathematical statements for division

(using times-table facts they are familiar with - see below)

Children explore arrays practically and are reminded of the inverse - using related multiplication facts to find division facts. E.g. if I know  $5 \times 3 = 15$ , I know  $15 \div 5 = 3$ . Children know that dividing means sharing into equal groups.

Suggested time: 1 lesson (recap from year 2 although some children may need longer).

$$84 \div 2 =$$

Year 2 -  
2, 5, 10, 3

Year 3 -  
4, 8, 6, 11)

Children draw their own arrays and use line to share into equal groups to find division facts. Some may also need to continue to use circles and drawings to share into equal groups (demonstrate how this method becomes more inefficient as the numbers get larger).

$$5 \times 3 = 15$$

$$3 \times 5 = 15$$

$$15 \div 5 = 3$$

$$15 \div 3 = 5$$

Children can find the inverse of known multiplication facts when presented with calculations.

Suggested time: 1 lesson (recap from year 2 although some children may need longer).

$$29 \div 8 = 3 \text{ REMAINDER } 5$$

Children are beginning to use known multiplication facts to realise when there is some 'left over' as a remainder.

$$66 \div 3 =$$

Tens		Ones	
10	10	1	1
10	10	1	1
10	10	1	1

Children move on to dividing larger two-digit numbers (beyond their times table knowledge) by sharing base ten or place value counters into equal groups. They should share the tens into equal groups and then share the ones. Children are introduced to having some 'left over' as a remainder.

*Suggested time: until secure.*

$$42 \div 3 =$$

*Suggested time: 1 lesson (recap from year 2 although some children may need longer).*

$$66 \div 3 =$$

Tens		Ones	
10	10	1	1
10	10	1	1
10	10	1	1

$$42 \div 3 =$$

Children use their own drawings or drawings they are presented with to share tens and ones into equal groups (including when exchanging is necessary). Children are introduced to having some 'left over' as a remainder.

He st  
and e  
rema

Suggested time: until secure.

Children begin to understand that they can exchange a ten for ten ones to divide further and explore this practically. Children are introduced to having some 'left over' as a remainder.

Suggested time: until secure.

# Year 4 - multiplication

Objective/s

Concrete

Pictorial

Abstract

To multiply two-digit and three-digit numbers by a one-digit number using formal written layout.

$$4 \times 126 =$$

$$327 \times 4 =$$

Use place value counters and/or base ten to show multiplication as repeated addition to multiply a two-digit or a

Children then use their own place value counter drawings or drawings that are presented to them to multiply a two-digit or three-digit number by a one-

<b>x</b>	<b>30</b>	<b>5</b>
<b>7</b>	<b>210</b>	<b>35</b>

$$210 + 35 = 245$$

Use the grid as an abstract representation of the concrete and pictorial. Children should be able to see when an exchange is needed when adding the multiplied values. Children need to be secure with multiplication fact e.g. knowing how to calculate  $30 \times 7$ .

(Showing the column method alongside can help children make the connection).

*Suggested time: 1 lesson without exchanging, 1 lesson with exchanging (children should be secure using this method before moving on).*

three-digit number by a one-digit number. Children should be able to see when an exchange is needed and see that the exchanged value is added NOT multiplied.

(Showing the abstract alongside the pictorial can help children make the connection).

Suggested time: 1 lesson without exchanging, 1 lesson with exchanging, beginning with 2-digits progressing to 3-digits.

$$36 \times 7 =$$

This should progress on to using place value counters shown as multiplication

digit number (either through repeated addition or multiplication). Children should be able to show when an exchange is needed and recognise that the exchanged value is added NOT multiplied.

(Showing the abstract alongside the pictorial can help children make the connection).

Suggested time: 1 lesson without exchanging, 1 lesson with exchanging, beginning with 2-digits progressing to 3-digits.

	H	T	O		
		3	4		
x			5		
		2	0	(5 × 4)	
+	1	5	0	(5 × 30)	
	1	7	0		

Children use expanded column method to multiply a two-digit or three-digit number by a one-digit number. Children should be able to show when an exchange is needed and know that the exchanged value is added NOT multiplied. Begin by showing the calculations at the side as a link to the grid method.

Suggested time: 1 lesson without exchanging, 1 lesson with exchanging (children should be secure using this method before moving on), beginning with 2-digits progressing to 3-digits

e.g.  $30 \times 7$  ADD  $6 \times 7$ . Children should be able to see when an exchange is needed and see that the exchanged value is added NOT multiplied.

Suggested time: 1 lesson without exchanging, 1 lesson with exchanging.

	H	T	O	
		3	4

	1	7	0	
	1	2		

	H	T	O	
	2	4	5	
x			4	
	9	8	0	
	1	2		

This should progress on to the compact column method to multiply two-digit and three-digit numbers by a one-digit number - showing exchanges where necessary.

			Suggested time: 1 lesson without exchanging, 1 lesson with exchanging (preferred method for year 4/5).				
<b>KEY VOCABULARY</b>	digits repeated addition	multiplication product	multiply commutative	times column method	array column method	groups of place value	lots of column grid

# Year 4 - division

Objective/s

Concrete

Pictorial

Abstract

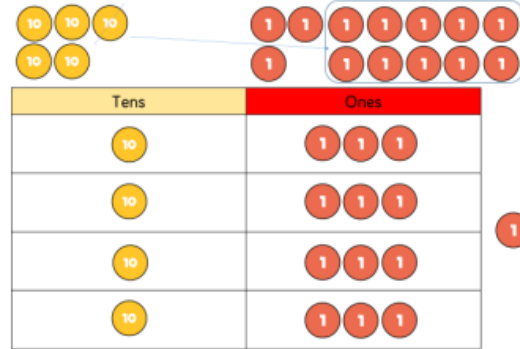

To divide two-digit and three-digit numbers by a one-digit number - non-statutory

To practise becoming fluent in the formal written method of short division with exact answers - non-statutory

Children use place value counters (alongside the abstract) - sharing hundreds, tens then ones - beginning with calculations that don't involve exchanging. Children realise that some can be 'left over' as a remainder.

*Suggested time: until secure.*

Children draw or are presented with pictures of place value counters. Children share into equal groups - sharing hundreds, tens then ones, beginning with calculations that don't involve exchanging. Children realise that some can be 'left over' as a remainder.

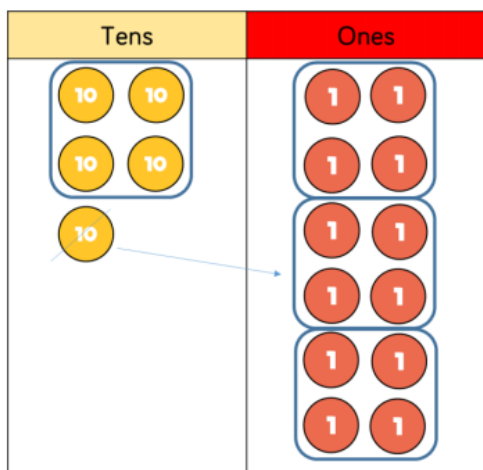

Children are introduced to the formal written method of short division alongside the pictorial and abstract. Children should begin with calculation that require one exchange, moving on to calculations that require more than one.

Children can show that some division problems have a remainder.

*Suggested time: 2 lessons, one without exchanging, one with exchanging.*

Children use place value counters to share larger numbers into equal groups, recognising that if there are tens or hundreds 'left over' these can be exchanged and then shared.

*Suggested time: until secure.*

$$42 \div 3 =$$

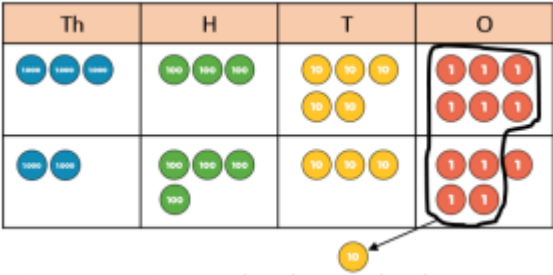

Children use their own drawings or drawings they are presented with to share hundreds, tens and ones into equal groups (including when exchanging is necessary). Children realise there are sometimes some 'left over' as a remainder.

*Suggested time: 2 lessons, one without exchanging, one with exchanging.*

**KEY

# Year 5 - multiplication

## Objective/s

## Concrete

## Pictorial

## Abstract

To multiply numbers up to 4 digits by a one- or two-digit number using a formal written method, including long multiplication for two-digit numbers

Use place value counters as repeated addition to multiply a four-digit number by a one-digit number. Children should be able to see when an exchange is needed and see that the exchanged value is added NOT multiplied.

(Showing the abstract alongside the pictorial can help children make the connection).

Suggested time: 1 lesson.

Children then use their own drawings or drawings that are presented to them to multiply a four-digit number by a one-digit number. Children should be able to show when an exchange is needed and recognise that the exchanged value is added NOT multiplied.

(Showing the abstract alongside the pictorial can help children make the connection).

Suggested time: 1 lesson.

	Th	H	T	O
	1	8	2	6
x				3
	5	4	7	8

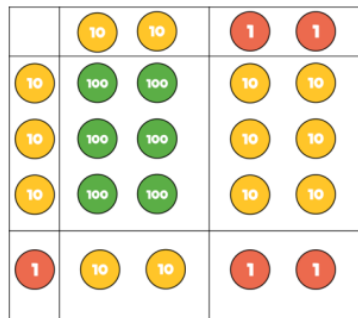

2                      1

Children use the column method to multiply a four-digit number by a one-digit number. Children should be able to show when an exchange is needed and know that the exchanged value is added NOT multiplied.

Suggested time: Children need to be secure with this method before moving on to multiplying 2-digits by 2-digits - preferred method for upper KS2.

Use dienes and/or place value counters to show multiplying a two-digit number by a two-digit number. Children should be able to see when an exchange is needed when adding the multiplication answers. Children need

Children draw / presented with place value counters to show multiplying a two-digit number by a two-digit number. Children should be able to see when an exchange is needed when adding the multiplication answers. Children need to be secure with multiplication fact e.g. knowing how to calculate  $20 \times 30$ .

(Showing the abstract alongside the pictorial can help children make the connection - showing the grid will help make the clearest connection here).

*Suggested time: 1 lesson.*

$\times$	20	2
30	600	60
1	20	2

Use the grid as an abstract representation of the concrete and pictorial. Children should be able to see when an exchange is needed when adding the multiplication answers. Children need to be secure with multiplication fact e.g. knowing how to calculate  $20 \times 30$ .

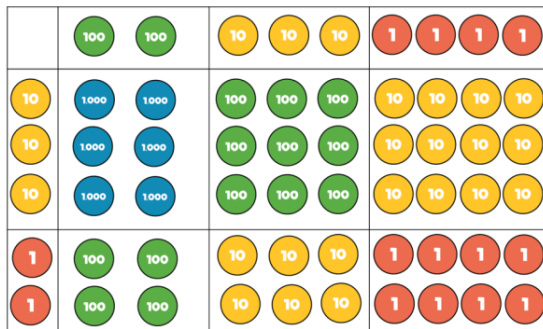

(Showing the column method alongside this can help children make the connection).

*Suggested time: 2/3 lessons - children should be secure using this method before moving on to the column method.*

to be secure with multiplication fact e.g. knowing how to calculate  $20 \times 30$ .

(Showing the abstract alongside the pictorial can help children make the connection - showing the grid will help make the clearest connection here).

Suggested time: 1 lesson.

This should progress on to using place value counters to show multiplying a three-digit or four-digit number by a two-digit number. Children should be able to see when an exchange is needed when adding the multiplication answers.

This should progress on to drawing/using drawings of place value counters to show multiplying a three-digit or four-digit number by a two-digit number. Children should be able to see when an exchange is needed when adding the multiplication answers.

(Showing the abstract alongside the pictorial can help children make the connection - showing the grid will help make the clearest connection here).

Suggested time: 1 lesson for three-digits, 1 lesson for four-digits.

$$\begin{array}{r}
 18 \\
 \times 13 \\
 \hline
 24 \quad (3 \times 8) \\
 30 \quad (3 \times 10) \\
 80 \quad (10 \times 8) \\
 \underline{100} \quad (10 \times 10) \\
 234
 \end{array}$$

The grid should progress on to using the expanded column method - the calculations at the side as a link to the grid.

Suggested time: 1/2 lessons.

(Showing the abstract alongside the pictorial can help children make the connection - showing the grid will help make the clearest connection here).

Suggested time: 1 lesson for three-digits, 1 lesson for four-digits.

This should progress on to using the compact column method (the calculations at the side as a link to the grid - once secure, these can be left out).

Suggested time: 2/3 lessons - children should be secure using this method before moving in to year 6 and before moving on to multiplying a three-digit or four-digit number by a two-digit number.

×	200	30	4
30	6,000	900	120
2	400	60	8

Th	H	T	O
	2	3	4
×		3	2
	4	6	8
<sup>1</sup> 7	<sup>1</sup> 0	2	0
7	4	8	8

This should be repeated for multiplying a three-digit or four-digit number by a two-digit number.

Suggested time: 2/3 lessons for three-digits, 2/3 lessons for four-digits. Children should be secure using this method before moving in to year 6.

**KEY  
VOCABULARY**

digits multiplication multiply times array groups of lots of  
repeated addition product commutative column method place value column grid

Children use place value counters (alongside the abstract) - sharing hundreds, tens then ones - beginning with calculations that don't involve exchanging. Children realise are taught that there can be remainders.

Suggested time: 1 / 2 lessons).

$$\begin{array}{r}
 1223 \\
 4 \overline{) 4892}
 \end{array}$$

Children use place value counters (alongside the abstract) to share larger numbers into equal groups, recognising that if there are remainders, these can be exchanged and then shared.

Suggested time: 1 / 2 lessons, beginning with simpler divisions.

necessary). This should also include divisions that have a remainder.

Suggested time: 1 / 2 lessons, beginning with simpler divisions.

**KEY  
VOCABULARY**

division

divide

share into equal groups  
groups of/lots of

remainder/left over

# Year 6 - addition

## Objective/s

## Concrete

## Pictorial

## Abstract

To practise addition with larger numbers, using the formal written methods of columnar addition - numbers up to 10,000,000.

Use place value counters along side the calculation. Children should know when to exchange.

*Suggested time: 1 lesson without exchanging, 1 lesson with exchanging.*

Draw place value counters in a place value chart to add. Children should know when to exchange and be able to show this in their drawings.

(Showing the abstract alongside the pictorial can help children make the connection).

*Suggested time: 1 lesson without exchanging, 1 lesson with exchanging.*

	Th	H	T	O
	3	3	5	6
+	2	4	3	5
	5	7	9	1
			1	

Use the column method to add. Children should know when to exchange and be able to show this in their calculations.

*Suggested time: 1 lesson without exchanging, 1 lesson with one exchange, 1 lesson with multiple exchanges. This should be taught until children are secure - preferred method for upper KS2.*

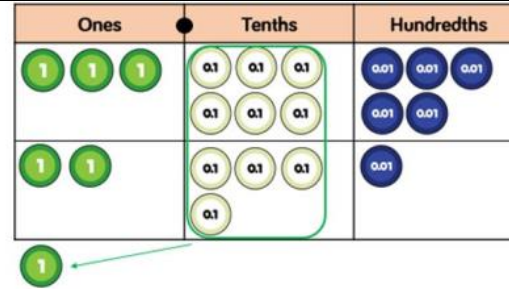

To practise calculations using decimal fraction equivalents to aid fluency.

Use place value counters alongside the calculation. Children should know when to exchange.

Use base 10 (using the representations above) to add decimals. Children will first need to be taught how to represent decimals using base 10. Children should know when to exchange.

Draw place value counters in place value chart to add decimals. Children should know when to exchange and be able to show this in their drawings.

(Showing the abstract alongside the pictorial can help children make the connection).

$$\begin{array}{r} 3.65 \\ + 2.41 \\ \hline 6.06 \\ \hline 1 \end{array}$$

Use the column method to add decimals. Children should know when to exchange and be able to show this in their calculations.

Children could be taught how to use 0 as a place holder when adding decimals. Possible rule to teach:

(Showing the abstract alongside the pictorial can help children make the connection).

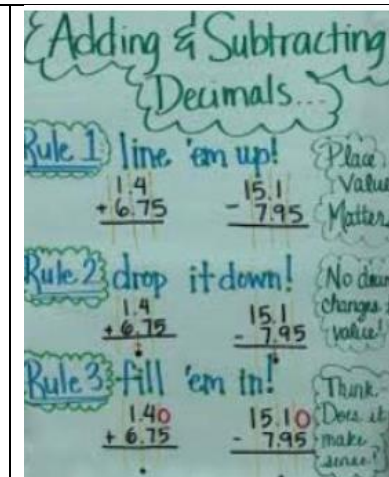

Suggested time: 1 lesson without exchanging, 1 lesson with exchanging.

Use pictures of base 10 to add decimals. Children should know when to exchange.

(Showing the abstract alongside the pictorial can help children make the connection).

Suggested time: 1 lesson without exchanging, 1 lesson with exchanging.

Suggested time: 1 lesson without exchanging, 1 lesson with one exchange, 1 lesson with multiple exchanges. This should be taught until children are secure - preferred method for upper KS2.

**KEY VOCABULARY**

 place value      column      exchange      regroup      decimal      decimal point      decimal places  
 commutative

# Year 6 - subtraction

Objective/s

Concrete

Pictorial

Abstract

To practise subtraction with larger numbers, using the formal written methods (columnar subtraction) - numbers up to 10,000,000.

Use place value counters alongside the calculation. Children should know when to exchange.

Suggested time: 1 lesson without exchanging, 1 lesson with exchanging.

$$5643 - 4316 =$$

Draw place value counters in a place value chart to subtract. Children should know when to exchange and be able to show this in their drawings.

(Showing the abstract alongside the pictorial can help children make the connection).

Suggested time: 1 lesson without exchanging, 1 lesson with exchanging.

	Th	H	T	O
	5	6	<del>3</del>	13
-	4	3	1	6
	1	3	2	7

Use the column method to add. Children should know when to exchange and be able to show this in their calculations.

Suggested time: 1 lesson without exchanging, 1 lesson with one exchange, 1 lesson with multiple exchanges. This should be taught until children are secure - preferred method for upper KS2.

To practise calculations using decimal fraction equivalents to aid fluency.

Use place value counters alongside the calculation. Children should know when to exchange.

$$0.64 - 0.33 = ?$$

Use base 10 to subtract decimals. Children will first need to be

Draw place value counters in place value chart to subtract decimals. Children should know when to exchange and be able to show this in their drawings.

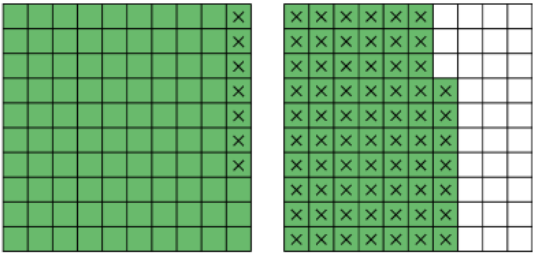

(Showing the abstract alongside the pictorial can help children make the connection).

$$\begin{array}{r} 4 \quad 1 \\ 5.43 \\ - 2.7 \\ \hline 2.73 \end{array}$$

Use the column method to subtract decimals. Children should know when to exchange and be able to show this in their calculations.

Children could be taught how to use 0 as a place holder when subtracting decimals.

Suggested time: 1 lesson without exchanging, 1 lesson with one exchange, 1 lesson with multiple exchanges. This

	<p>taught how to represent decimals using base 10.</p> <p>(Showing the abstract alongside the pictorial can help children make the connection).</p> <p><i>Suggested time: 1 lesson without exchanging, 1 lesson with exchanging.</i></p>	<p style="text-align: center;"><math>1.67 - 0.74 =</math></p>  <p>Use pictures of base 10 to subtract decimals.</p> <p>(Showing the abstract alongside the pictorial can help children make the connection).</p> <p><i>Suggested time: 1 lesson without exchanging, 1 lesson with exchanging.</i></p>	<p><i>should be taught until children are secure - preferred method for upper KS2.</i></p>
