

Science – Plants

In Science, we are going to continue our learning about Plants.

How do plants reproduce? Can you research the different means of seed dispersal methods and name plants that use them?

English -

In English, we will write persuasive arguments about migration, as well as exploring different types of poetry.

Choose your favourite type of poetry and write your own poem. It could be a riddle, limerick, haiku, or any other type of poem.

Computing – Branching Databases

We will be learning to record set data in a table to create a bar graph.

Can you think of a question with 5 possible answers and ask as many people as possible which answer they prefer. For example, what is your favourite flavour ice cream?

Geography – Migration

We are going to be exploring why people move from one place to another. We will look at the reasons people may move homes within their country or from one country to another.

Lots of people move to England? Why? Interview someone you know who has moved from another country to England. What reasons did they choose to move here?

Year 3

Home Learning Project

Summer 2

Migration, Textiles, Fruit and Vegetables, Plants, Databases

French – Fruit and vegetables

This term, we will be learning how to say fruits and vegetables in French and how to show preference for what we like or don't like.

Can you think of fruits and vegetables you like and those you don't like?

Art – Textiles

We will be exploring the applique method as best utilised by the artist Billie Zangewa. We will be making an image by sewing different materials on top of each other.

Research Billie Zangewa and draw a picture in the same style.
